Who is this guide for?

This guide is for guests, registered users, and non-technical Achva staff who administer the site. It assumes that you have a browser and the Inclusify website address. It does not include installation, programming, or system setup instructions.

Website: [Inclusify - Production](#)

1. Introduction

Academic writing can unintentionally repeat outdated terminology, biased assumptions, medicalizing language, or inaccurate claims about LGBTQ+ people. Standard spelling and grammar tools do not explain these issues or suggest community-informed alternatives.

Inclusify is a natural language processing platform developed in collaboration with the Achva LGBT organization to detect and correct LGBTQphobic content in academic writing in both Hebrew and English. It highlights the exact phrase, explains why it may be problematic, and offers a more inclusive alternative.

Use Inclusify while drafting a paper, reviewing a thesis chapter, editing a publication, preparing teaching material, or checking a document before sharing it. The system supports both quick guest use and saved work for registered users.

Important
Inclusify supports informed review. Read each explanation in context and use your academic judgment before changing a sentence.

2. User types at a glance

User type	Who they are	What they can do
Guest	Anyone visiting the site	Analyze text or documents, read results, and download the current report. The run is not saved to a personal history.
Registered user	Students, researchers, lecturers, and editors	Everything a guest can do, plus saved analysis history, re-downloading available reports, a profile, and feedback on findings.
Site administrator	Trusted, non-technical Achva staff	Everything above, plus usage statistics, user and role management, AI engine health statistics, and user feedback review.

Choose guest use for a quick one-time check. Create a free account when you want to keep non-private analyses and return to reports later. Use an administrator account only when Achva has assigned you that responsibility.

3. Getting started

1. Open the Inclusify website in a modern browser on a computer, tablet, or phone.
2. Select Start Analyzing to begin immediately, or select Glossary to learn about current terminology first.
3. Use the language control in the top navigation to switch languages — EN selects English and עב selects Hebrew. Hebrew changes the full page to a right-to-left layout.
4. Select the moon or sun icon to switch between light and dark mode.
5. Open the user menu to sign in, view My Analyses, or edit your Profile. Administrators reach the Dashboard from the link in the top navigation bar, next to Glossary.

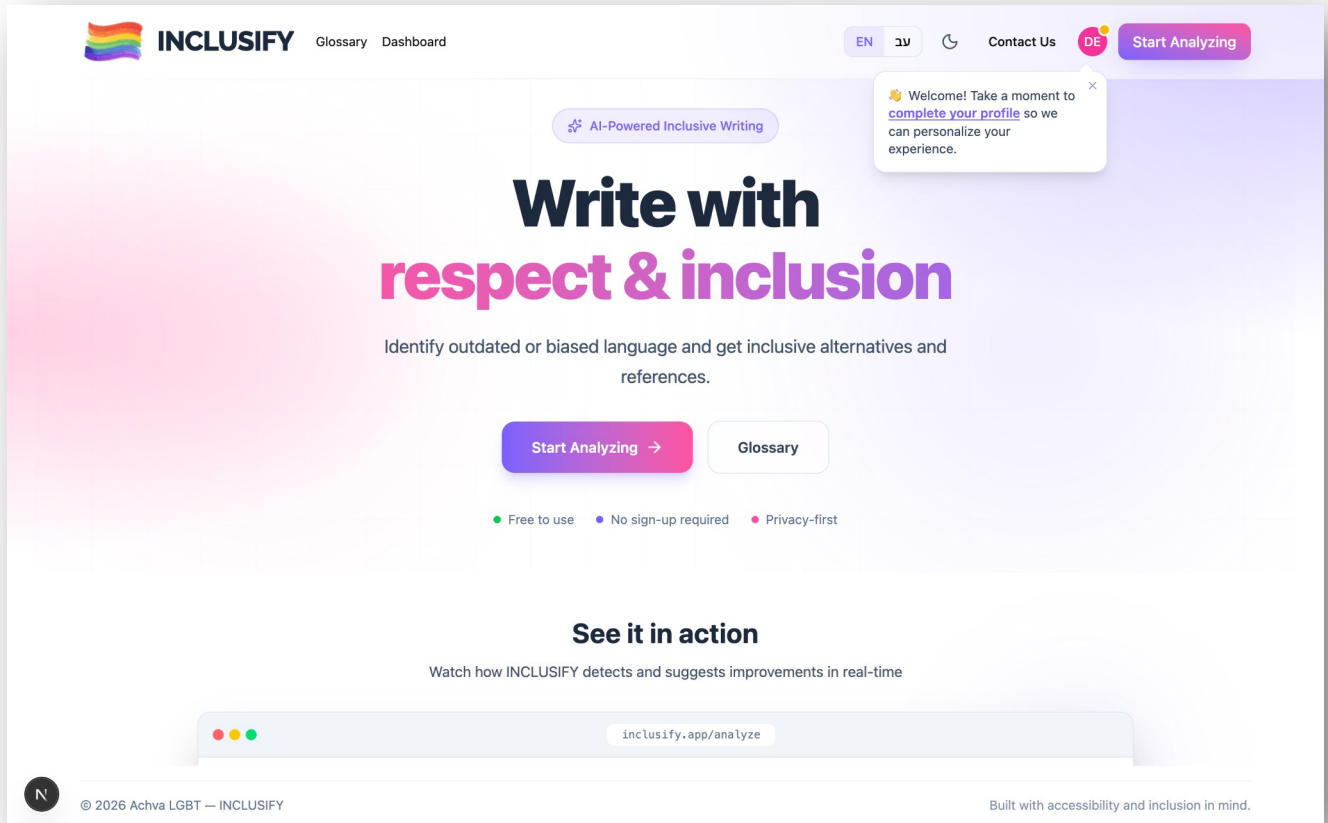

Figure 1 - Inclusify landing page and main navigation

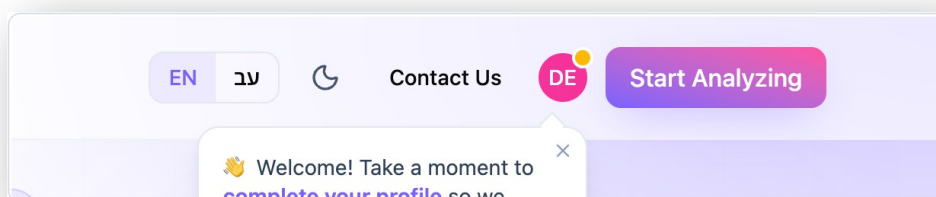

Figure 2 - Language, theme, contact, and user controls

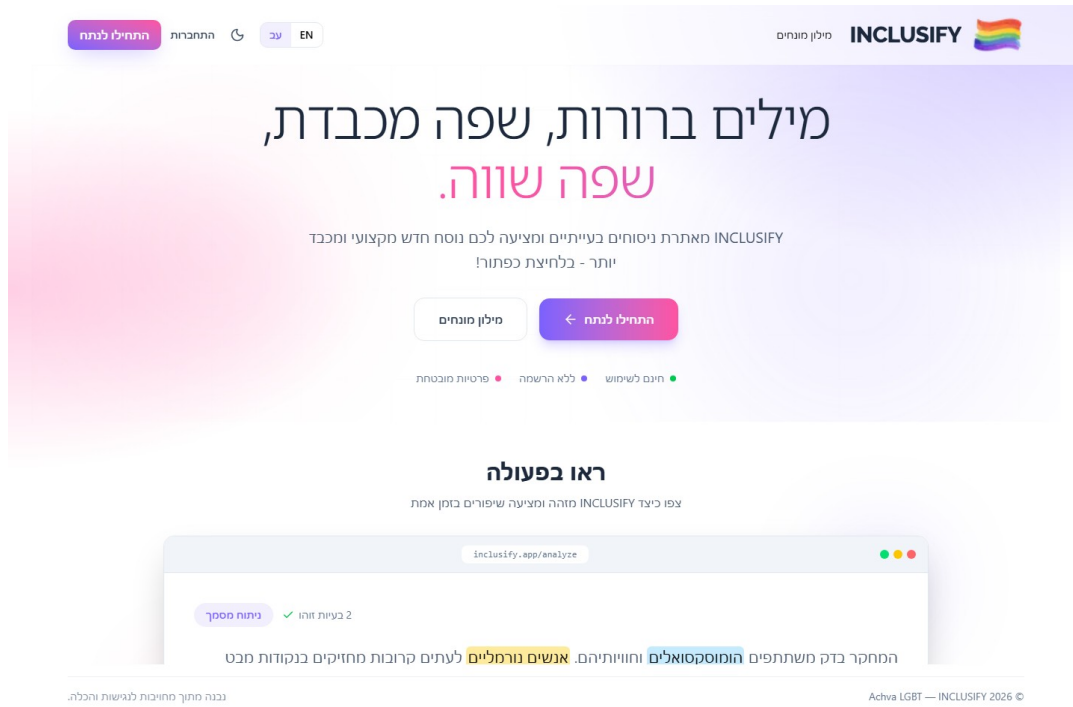

Figure 3 - The Hebrew interface in its right-to-left layout

Guest access

You do not need an account to analyze a document. Create an account only when you want saved history and access to stored reports.

3.4 Account access and profile setup

1. Open the user menu and select Login.
2. Enter your email and password, or select Sign in with Google.
3. To create an account, select Sign up and enter an email address, a password of at least eight characters, and the same password again.
4. To reset a password, select Forgot password?, enter your email, and open the reset link sent to your inbox.

Figure 4 - Account access options using the current interface labels

3.5 Complete your profile

After your first sign-in, Inclusify may ask you to complete your profile. Enter your full name, profession or role, and institution, then select Save Profile. You may also select Skip for now and complete these details later from Profile.

Google accounts

When an email was registered through Google, use Sign in with Google. That account does not have a separate Inclusify password unless a password-based account was created separately.

4. Analyzing a document

4.1 Upload a file

1. Select Start Analyzing.
2. Keep Upload a file selected.
3. Drag one document into the upload area, or select the area and browse for a file.
4. Choose a PDF, DOCX, PPTX, or TXT file. The file must be smaller than 50 MB and contain no more than 50 pages, whichever limit is reached first.
5. Review the selected file name and size, then select Analyze Paper.

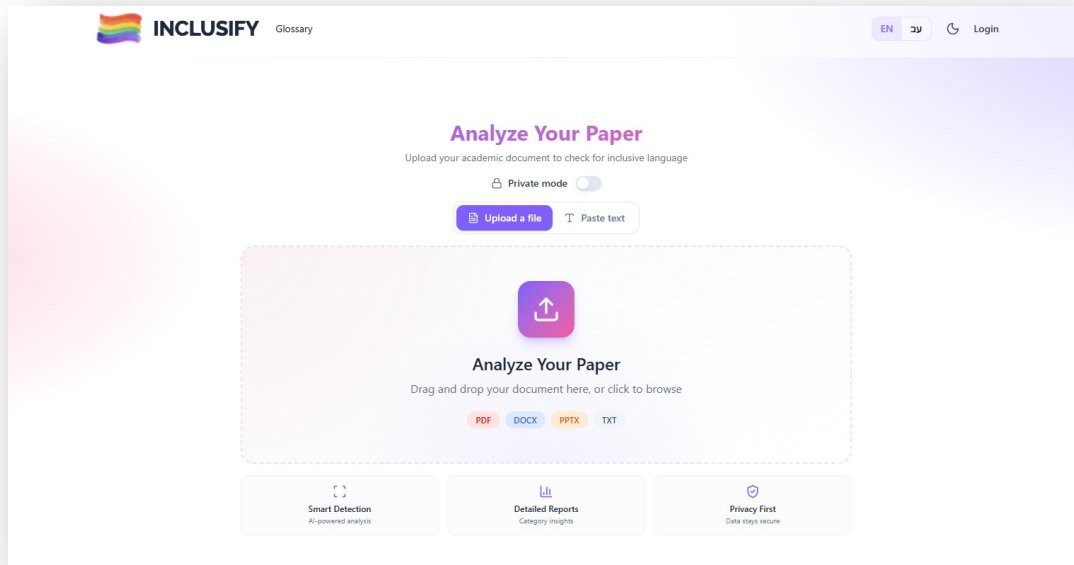

Figure 5 - File upload screen and supported formats

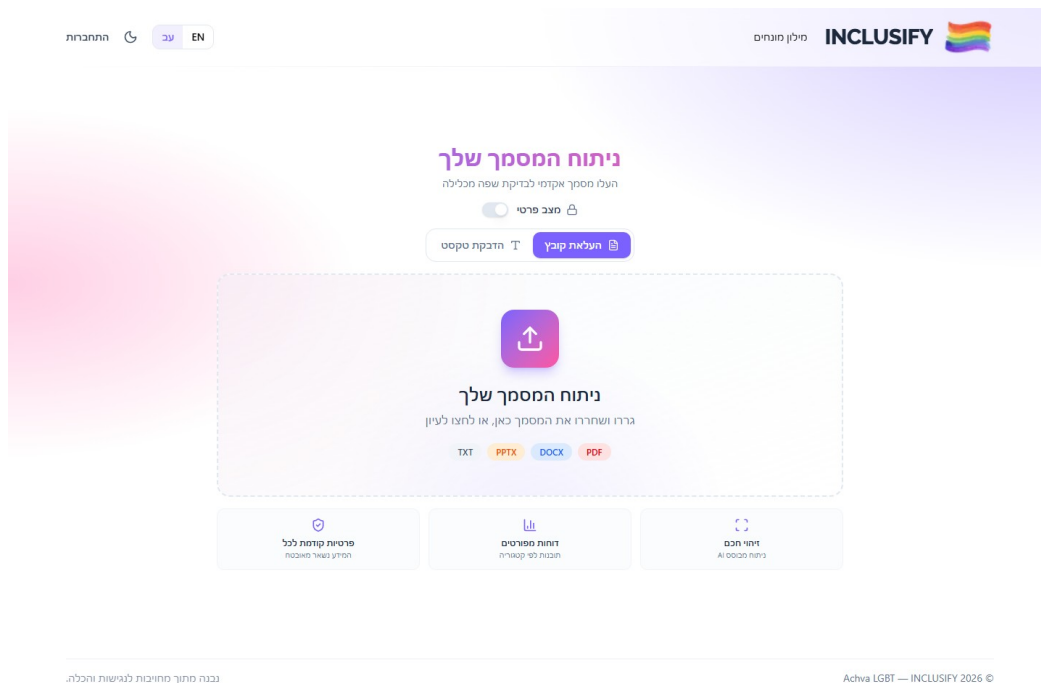

Figure 6 - The upload screen in Hebrew, right-to-left

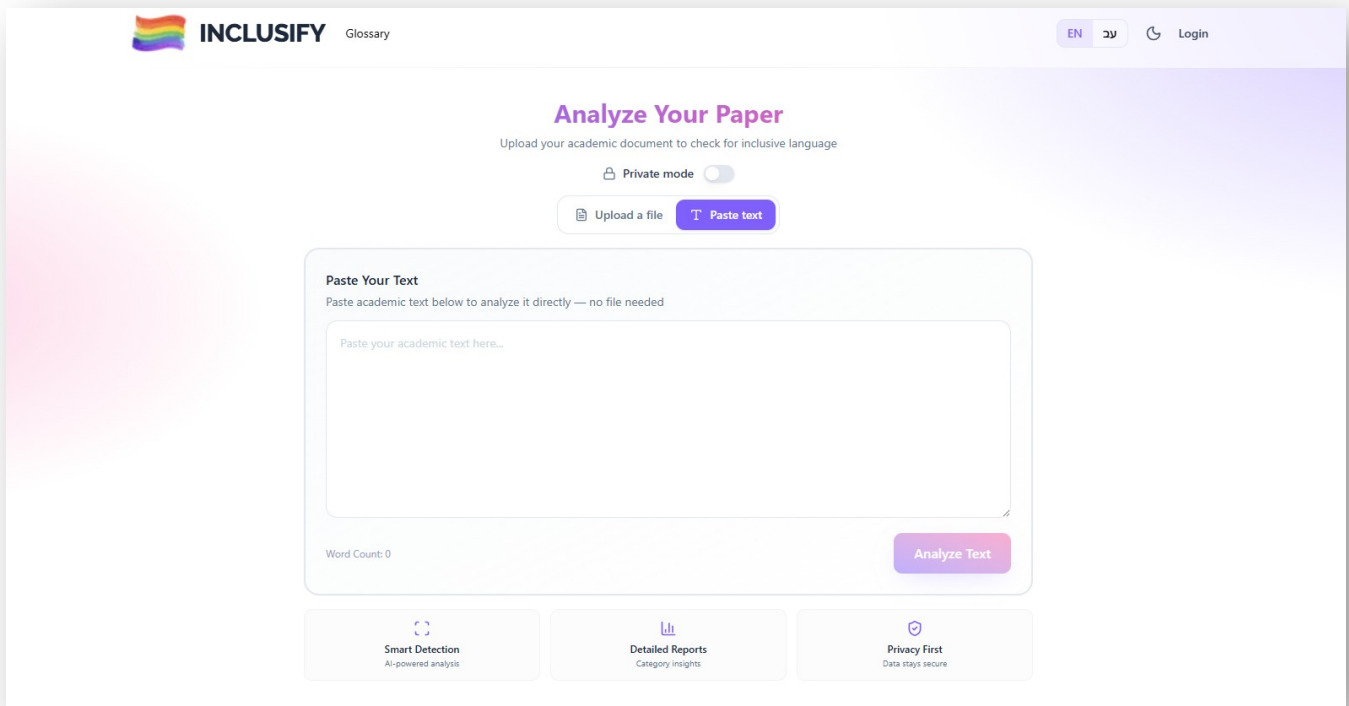

Document limits

Use a file with selectable text whenever possible. Password-protected, corrupted, or unsupported files cannot be analyzed. Very long documents may need to be divided into shorter sections.

Scanned PDFs may require additional text recognition and can take longer. If the system reports that a scan has no readable text, use a version with selectable text or paste the text directly.

4.2 Paste text directly

1. Select Paste text on the analysis page.
2. Paste at least 20 characters of academic text into the text box.
3. Review the Private Mode setting, then select Analyze Text.

The screenshot displays the 'Analyze Your Paper' section of the Inclusify web application. At the top, the header includes the Inclusify logo, a 'Glossary' link, and language selection options for English (EN) and Hebrew (עברית), along with a 'Login' button. The main heading is 'Analyze Your Paper', followed by the instruction 'Upload your academic document to check for inclusive language'. Below this is a 'Private mode' toggle switch, currently set to 'off'. Two buttons are available: 'Upload a file' and 'Paste text', with the latter being highlighted in purple. The 'Paste text' workflow is detailed in a box titled 'Paste Your Text', which instructs users to 'Paste academic text below to analyze it directly — no file needed'. It features a large text input area with a placeholder 'Paste your academic text here...'. Below the input area, it shows 'Word Count: 0' and an 'Analyze Text' button. At the bottom of the interface, three feature cards are visible: 'Smart Detection' (AI-powered analysis), 'Detailed Reports' (Category insights), and 'Privacy First' (Data stays secure).

Figure 7 - Paste text and Private Mode controls

4.3 Private Mode

Private Mode is off by default. Turn it on when you do not want the text or result stored. The analysis then runs in memory only, and the result is shown only in the current session. Because nothing is saved, the run will not appear in My Analyses and its report cannot be re-downloaded later.

4.4 While the analysis is running

Keep the page open. Inclusify uploads or reads the text, extracts the document content, analyzes it, and prepares the result. There is no cancel button: to stop a run, leave the page and select Leave & cancel in the message that appears.

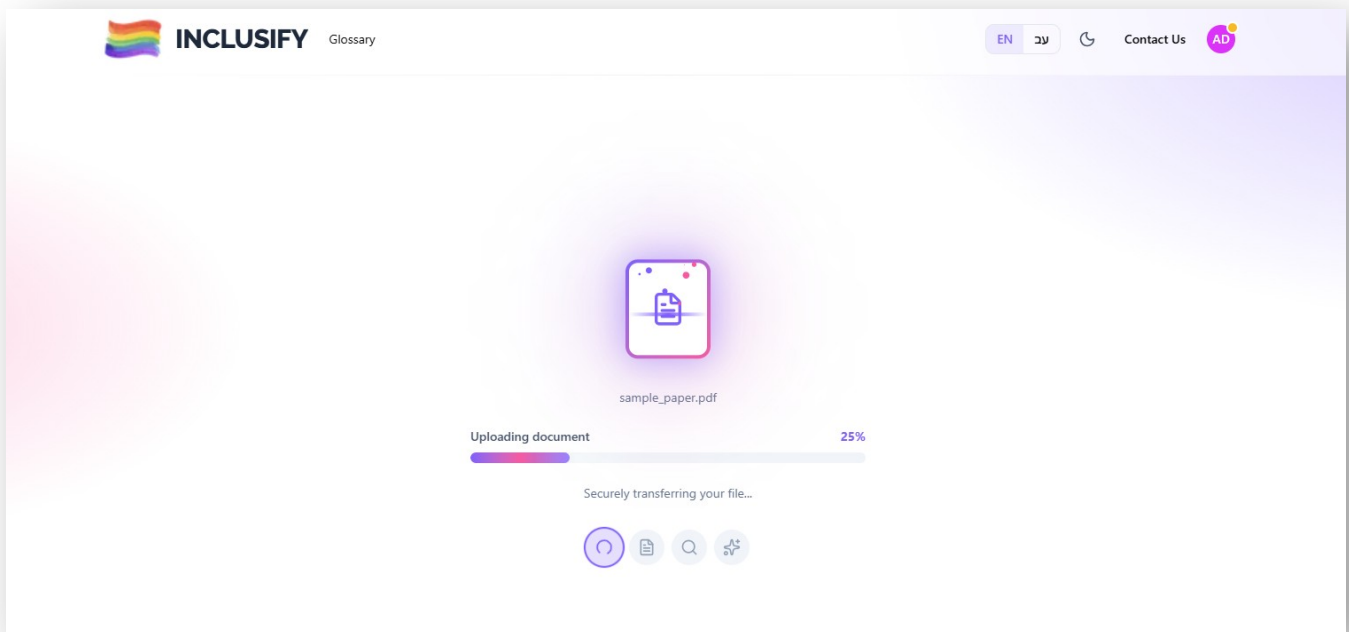

Figure 8 - Processing stages shown in plain language

First analysis after inactivity

When the site has been idle, the first analysis may take about one to three minutes while the AI engine starts. Later analyses are usually faster. If a run ends with an error, retry it.

5. Reading your results

The desktop results screen places the document on the left and the results summary on the right. On a phone, Inclusify shows a single-column summary report instead of the full interactive document view.

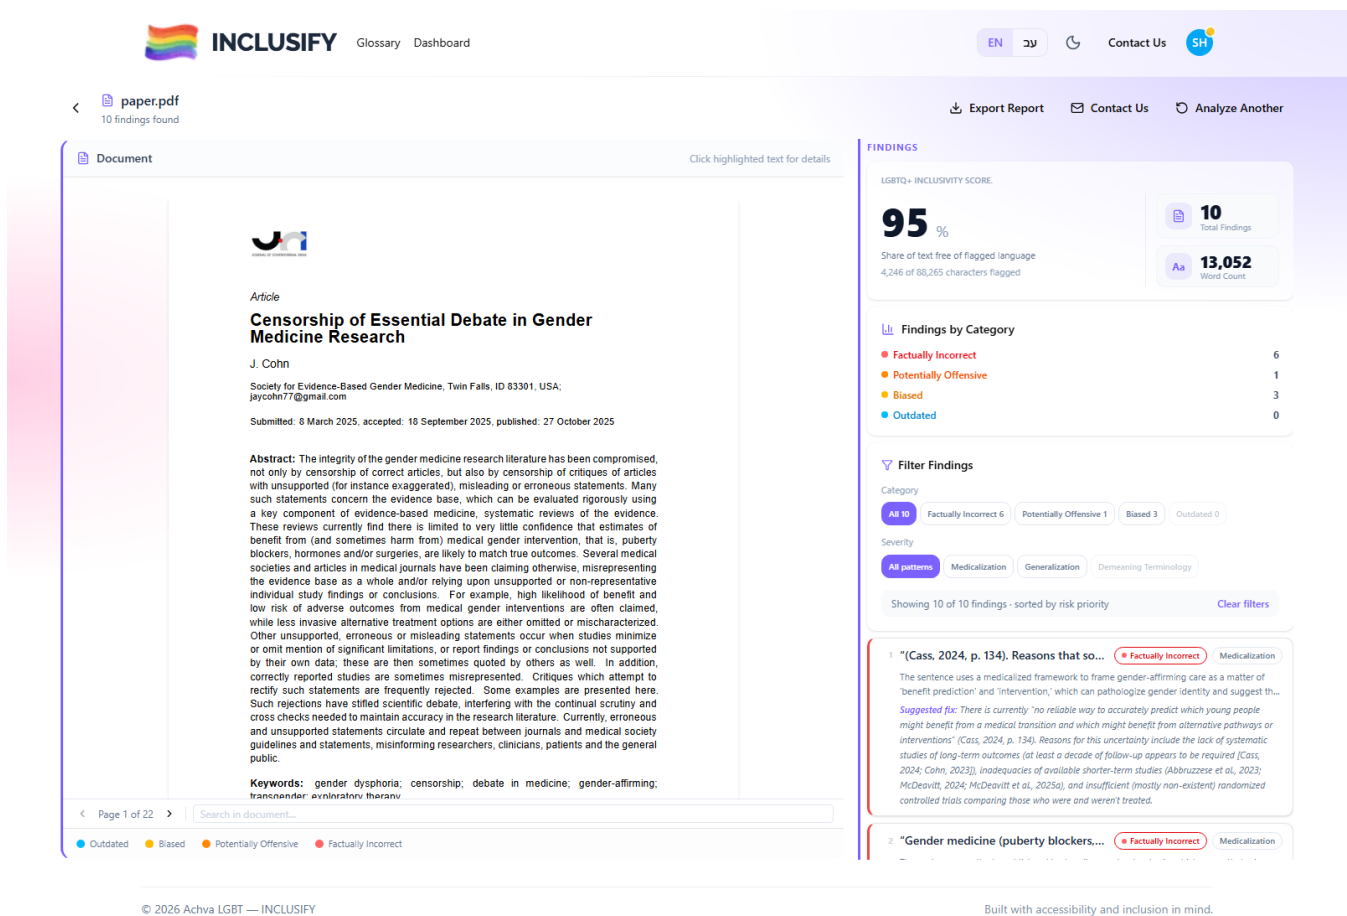

Figure 9 - Results screen with highlighted text, score, categories, and filters

5.1 Understand the summary

- **LGBTQ+ INCLUSIVITY SCORE:** the percentage displayed on the summary card. A higher percentage means less of the document was marked for review.
- **Total Findings:** the number of significant findings the system reports for the analyzed text.
- **Word Count:** the approximate number of words in the analyzed text.
- **Findings by Category:** the number and percentage of findings in each of the four categories.

Do not use the score alone

Open the individual findings. One important factual issue may require attention even when the overall score is high.

5.2 Read an individual finding

1. Review the findings list. Each card already shows the explanation and a Suggested fix without requiring a click.
2. Read the Flagged Term and the additional tag beside the category, which describes the type of bias or language pattern.
3. Read Why problematic for a plain-language explanation of the concern.
4. Review Confidence and the Suggested fix. Select the text highlight or finding to open the side panel, where the same correction is labeled Suggested Alternative and more details are shown.
5. Open any listed reference when you need additional background.
6. Select Yes or No under Was this flag helpful? Your rating helps improve future versions of the AI engine.
7. Select Close to return to the complete results view.

✖
Factually Incorrect
Medicalization

✖
Factually Incorrect

🔗
FLAGGED TERM

"homosexuality is a psychiatric disorder"

🔗
WHY PROBLEMATIC

This is factually incorrect. The APA removed homosexuality from the DSM in 1973 and the WHO from the ICD; it is recognized as a normal variation of human sexuality, not a disorder.

Confidence 62%

🔗
SUGGESTED ALTERNATIVE

homosexuality is a normal variation of human sexuality

🔗

Was this flag helpful?

👍 Yes
👎 No

Close

Figure 10 - Finding detail panel with explanation, alternative, references, and feedback

5.2.1 The four finding categories

Category	Meaning	Simple example
Outdated	Terminology that is no longer considered current or precise.	Use "sexual orientation" instead of "sexual preference" when attraction is not being framed as a choice.
Biased	A generalization or framing that treats one group as the default.	Replace "normal people" with the specific comparison group.
Potentially Offensive	Language that may demean, stigmatize, or disrespect people.	Replace a slur or dismissive label with respectful terminology.
Factually Incorrect	A claim that conflicts with accepted current knowledge.	Do not describe homosexuality as a psychiatric disorder.

5.3 Filter and review findings

1. Use the filters labeled Category and Severity to narrow the findings shown on screen.
2. Select the options that match the findings you want to review.
3. Select Clear filters to return to the complete list.
4. Use the document search and page controls to move through a long uploaded file.
5. Select Analyze Another when you are finished and want to start a new check.
6. Switch to Hebrew when you want the interface in a right-to-left layout. The findings, filters, and score card all mirror.

Priority order

The findings list is sorted by risk priority, so Factually Incorrect and Potentially Offensive findings appear before lower-priority items.

The screenshot displays the INCLUSIFY web application interface. The top navigation bar includes the INCLUSIFY logo, a 'Glossary' link, and language options (EN, עב) with a 'Contact Us' button. The main content area is titled 'Censorship of Essential Debate i...' and shows '9 findings found'. The left sidebar contains a 'Document' view of a PDF titled 'Censorship of Essential Debate in Gender Medicine Research' by J. Cohn. The right sidebar, labeled 'FINDINGS', displays the 'LGBTQ+ INCLUSIVITY SCORE' as 95%, indicating that 3,935 of 88,265 characters are flagged. It also shows '9 Total Findings' and a 'Word Count' of 13,052. Below this, a 'Findings by Category' table lists: Factually Incorrect (5), Potentially Offensive (1), Biased (3), and Outdated (0). A 'Filter Findings' section allows filtering by Category (All 9, Factually Incorrect 5, Potentially Offensive 1, Biased 3, Outdated 0) and Severity (All patterns, Medicalization, Generalization, Demeaning Terminology). The bottom of the sidebar shows 'Showing 9 of 9 findings - sorted by risk priority' and a 'Clear filters' button. The footer includes '© 2026 Achva LGBT — INCLUSIFY' and 'Built with accessibility and inclusion in mind.'

Figure 11 - Filters and the findings list on the results screen

6. Downloading the report

- 1. On the results screen, select Export Report.
- 2. Wait while Inclusify prepares the PDF. The report is written in the language of the analyzed document, so a Hebrew document produces a Hebrew report.
- 3. Save the file from your browser. The file name is based on the analyzed document.
- 4. Open the PDF and review the score, summary, and findings before sharing it with a lecturer, colleague, or supervisor.

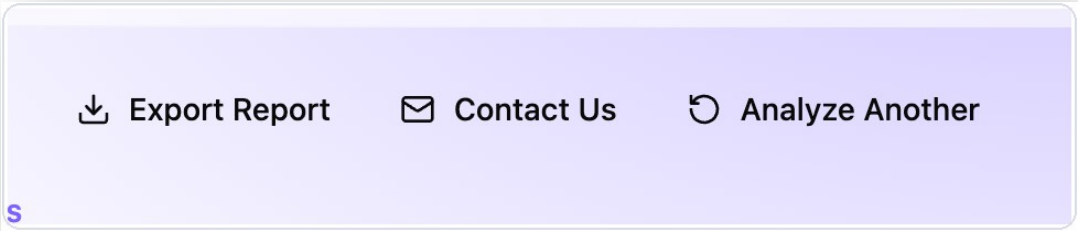

Figure 12 - Export Report is available at the top of the results screen

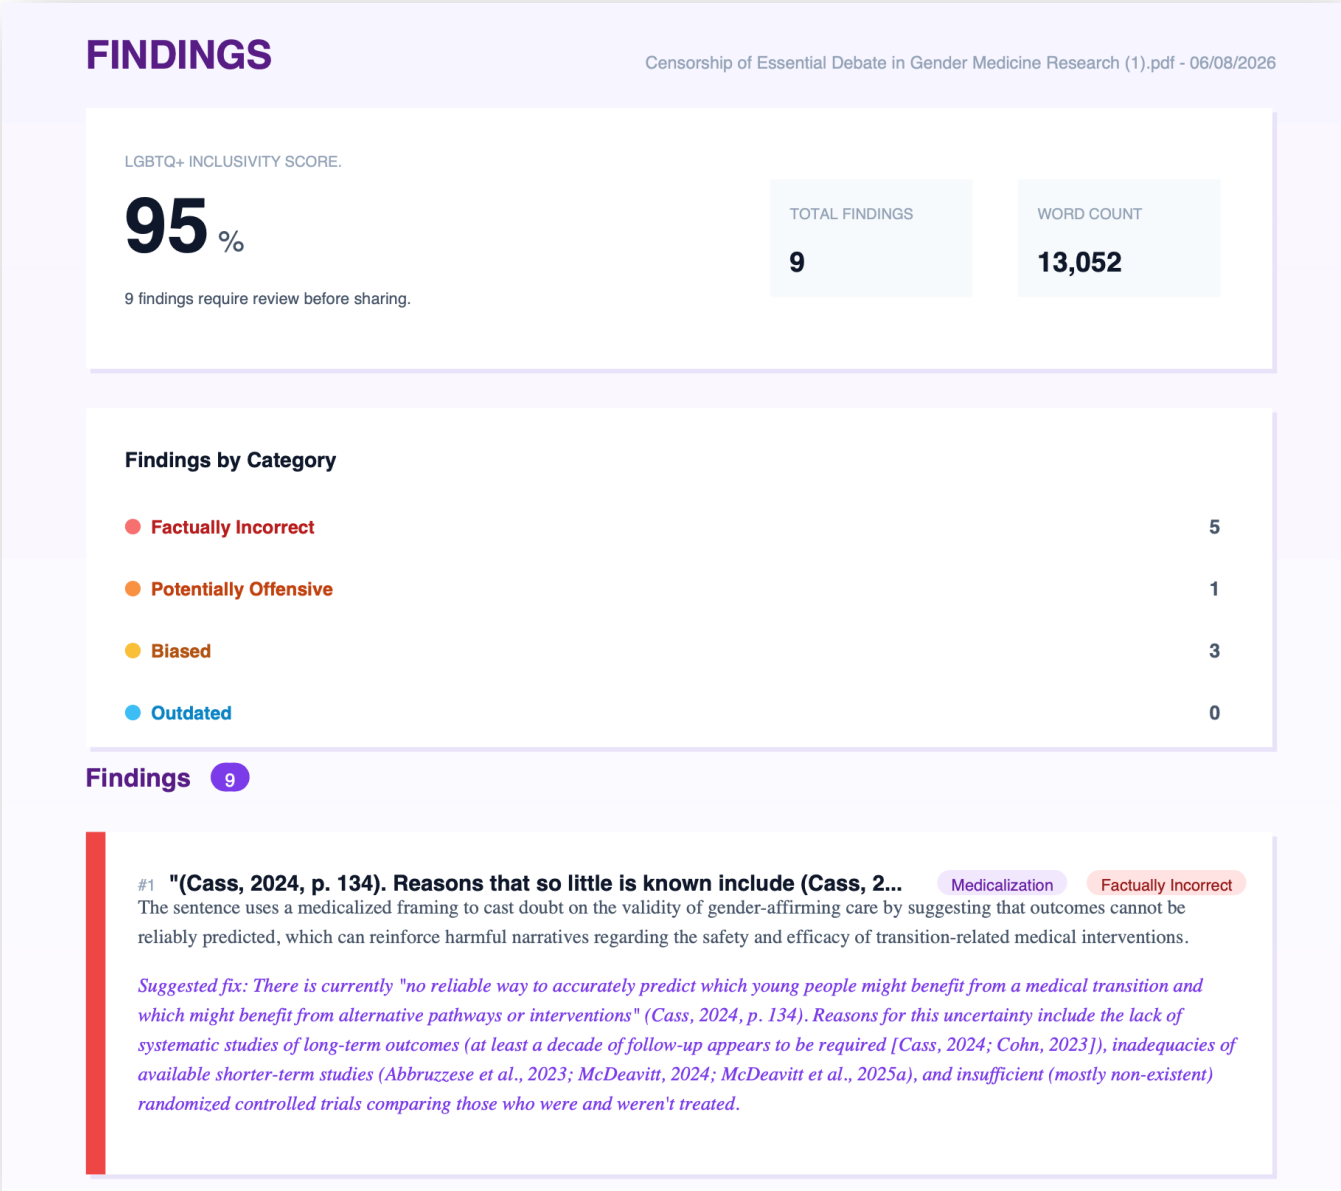

Figure 13 - Main information included in the downloadable PDF report

6.1 What the report contains

- The Inclusivity Score and total number of findings.
- Findings grouped by category.
- The exact flagged phrase for each finding.
- An explanation of why the phrase was flagged.
- A suggested inclusive alternative and any available references.

Re-download later

Signed-in, non-private analyses may include a stored report in My Analyses. Private Mode runs and some older runs do not have a stored report.

7. Your workspace

This section applies to signed-in users.

7.1 My Analyses

1. Open the user menu and select My Analyses.
2. Review the summary cards for your total analyses, average score, total findings, and clean analyses. The cards appear only once you have a saved analysis, and the average score and clean analyses figures describe the analyses listed on the current page.
3. Select an analysis card to review its saved findings.
4. Select the download icon to re-download the stored report when one is available.
5. Select the delete icon, review the confirmation message, and select Delete to remove the analysis and its findings.

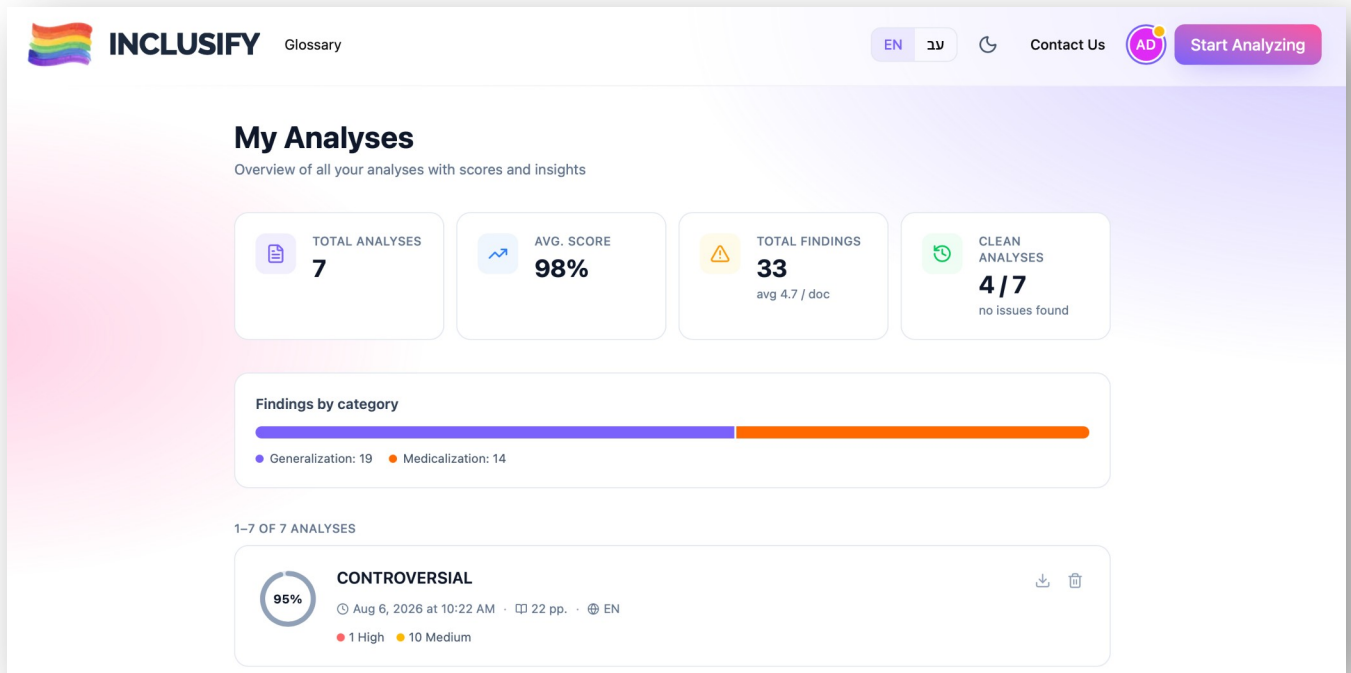

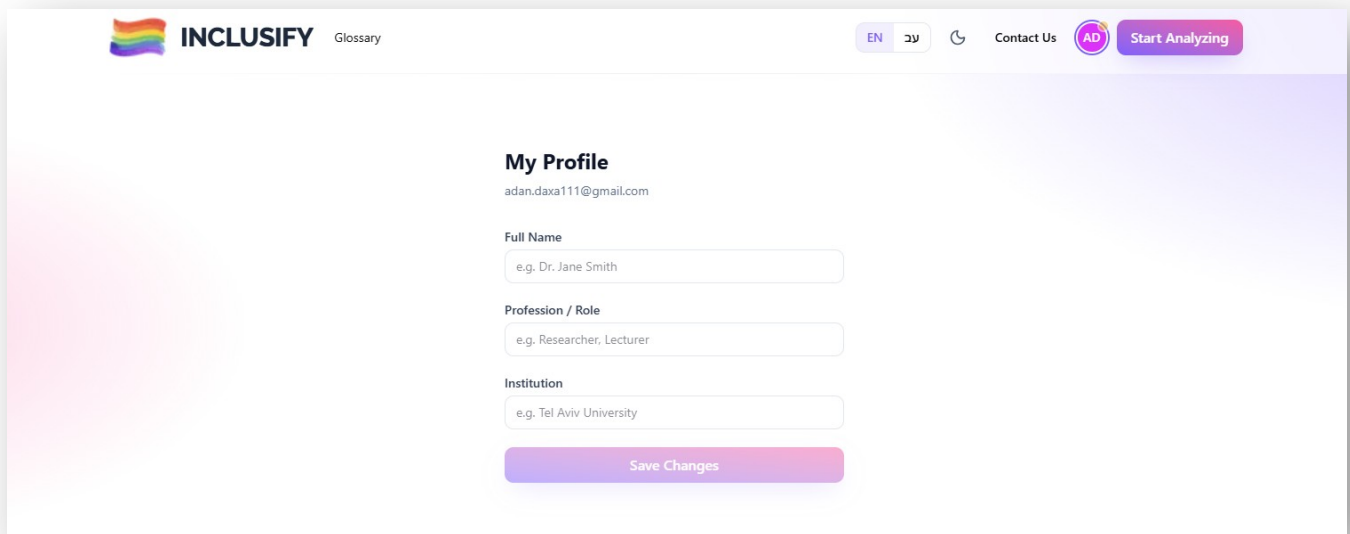

Figure 14 - My Analyses workspace and saved-analysis actions

Private runs are not listed

A run does not appear in My Analyses when Private Mode was enabled or when the analysis was completed without signing in.

7.2 Profile

Open Profile to update your full name, profession or role, and institution. Your email address is shown for reference and cannot be edited, and Save Changes stays unavailable until you change something in the form.

INCLUSIFY Glossary

Figure 15 - Profile fields available to a registered user

8. Learning resources and contact

8.1 Use the LGBTQ+ Glossary

1. Select Glossary in the top navigation.
2. Enter a word in Search terms to find a specific concept.
3. Filter the glossary by All Terms, Gender Identity, Sexual Orientation, Expression, or Concepts.
4. Open a term to read its definition and related terminology.
5. Switch to Hebrew when you need the bilingual version.

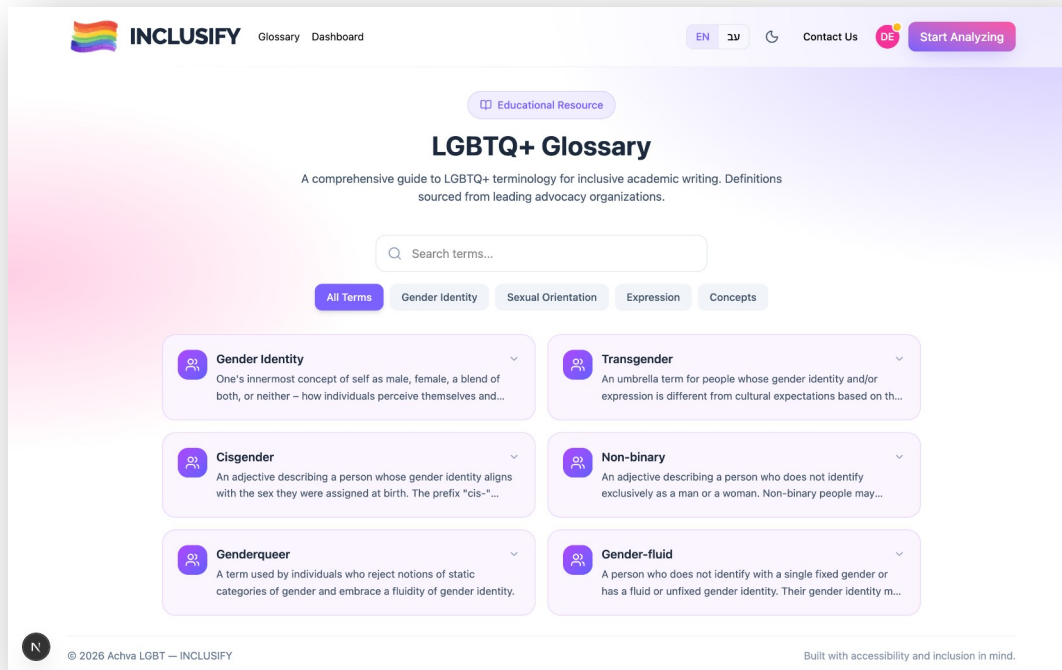

Figure 16 - Searchable LGBTQ+ glossary and category filters

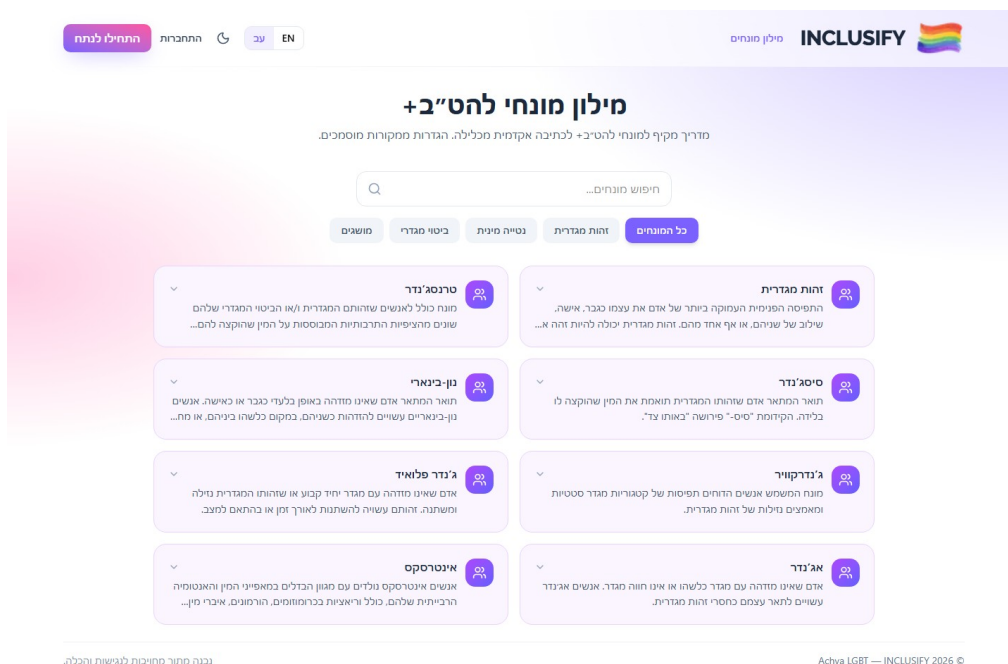

Figure 17 - The glossary in Hebrew

8.2 Contact the team

1. Sign in, then select Contact Us.
2. Enter a subject and message. Your name, email address, and institution are taken automatically from your account and cannot be edited in this form.
3. When you open the form from a results page, the report is attached automatically. A message in the form confirms that the report was included.
4. Select Send Message.

Support inbox

Messages submitted through Contact Us are sent to inclusify.support@gmail.com.

9. Administrator guide

For trusted Achva staff. No technical knowledge is required.

9.1 Open the administrator area

1. Sign in with an account that has administrator rights.
2. Select Dashboard in the top navigation bar, next to Glossary.
3. Choose a time range, such as Last 30 days, when you want the charts to focus on a specific period.
4. Select Overview, Users, Model Performance, or Feedback to move between the four administrator areas.

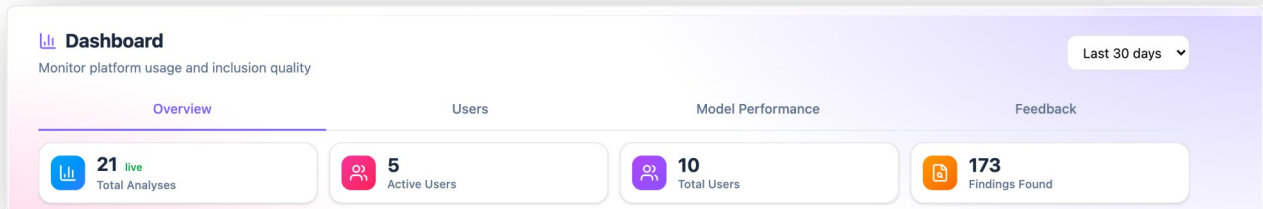

Figure 18 - The four administrator tabs

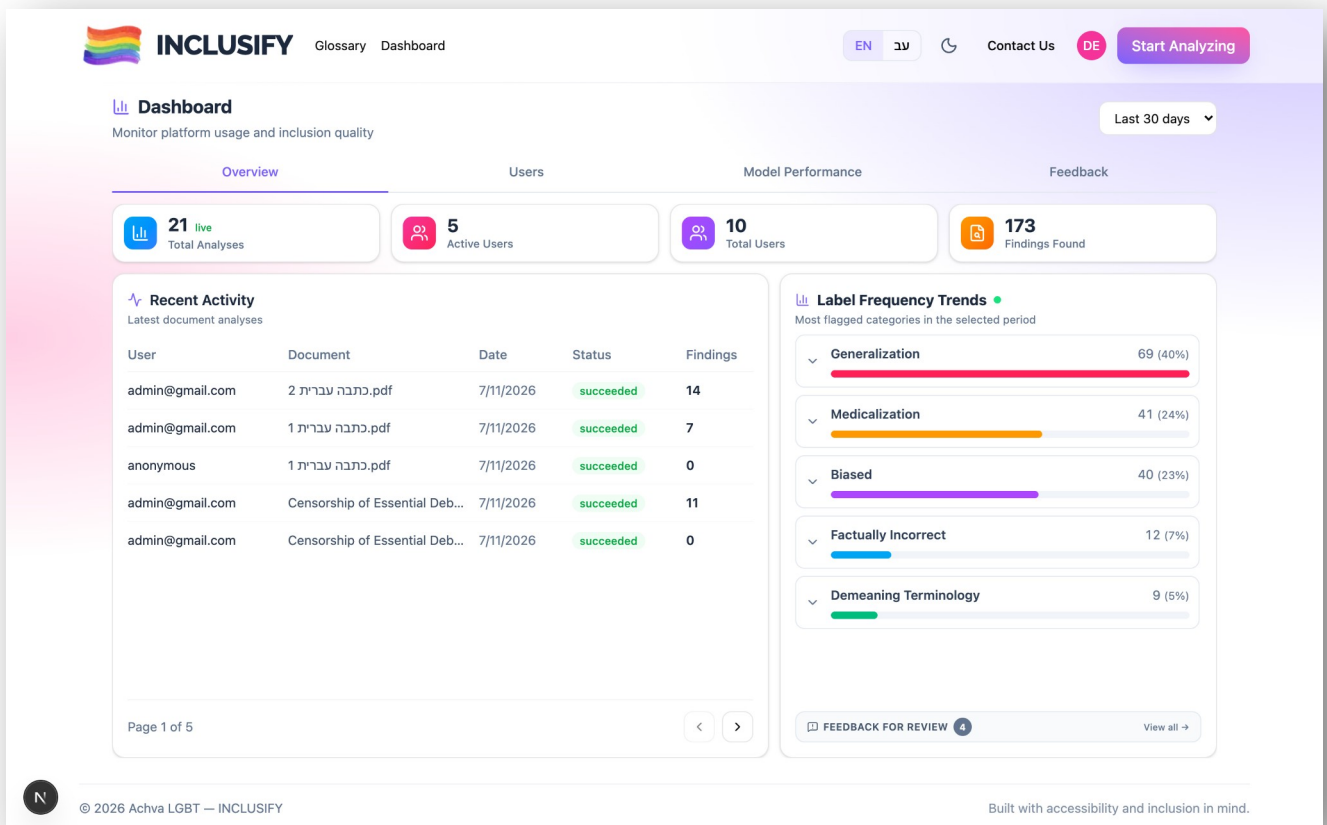

Figure 19 - Administrator Overview with usage statistics and recent activity

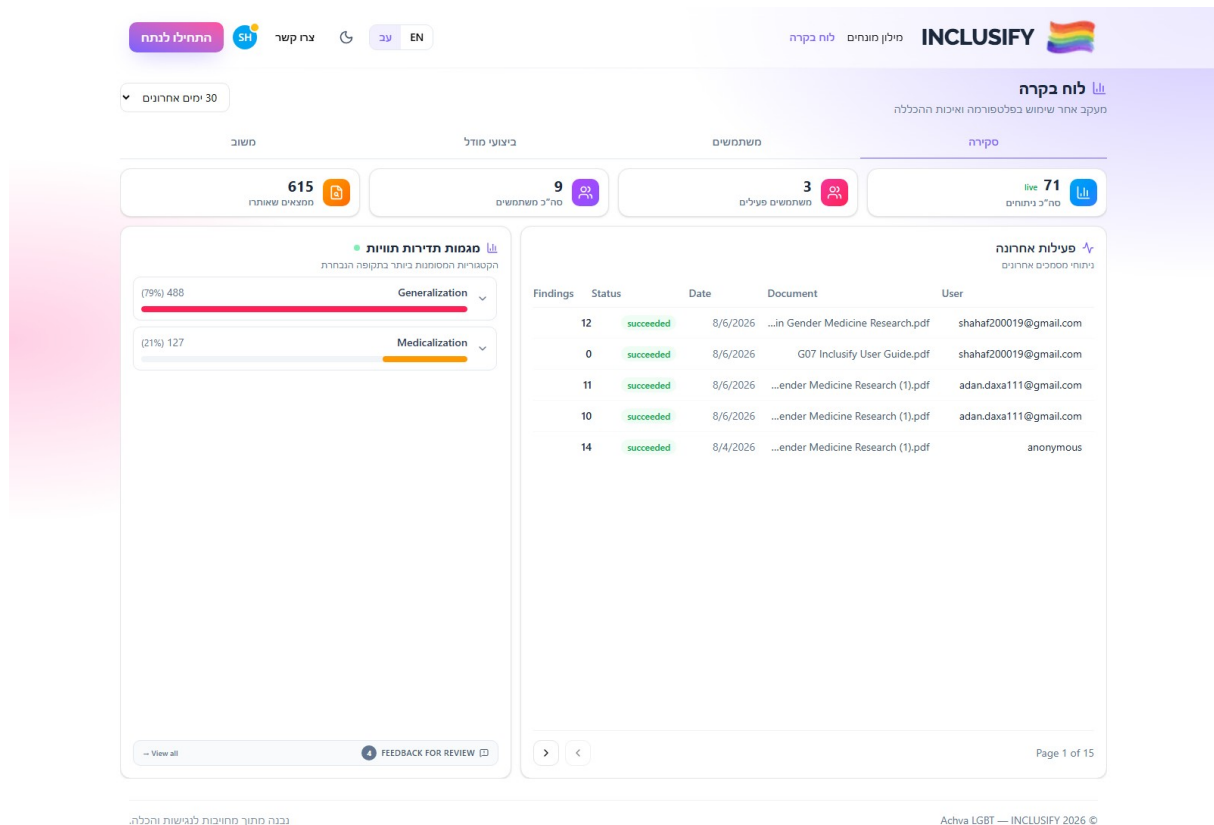

Figure 20 - The administrator dashboard in Hebrew

9.1.1 Understand the Overview tab

- Total Analyses: how many analyses were completed in the selected period.
- Active Users: how many people used the system in that period.
- Total Users: how many accounts exist.
- Findings Found: how many findings the system returned.
- Recent Activity: the latest analyses and whether each completed successfully.
- Label Frequency Trends: the labels flagged most often in the selected period, combining the four categories with more specific language patterns.

The dashboard updates from current system data

Use the Overview tab to notice usage changes and repeated categories. It is a monitoring page, not a place to edit documents or change the glossary.

9.2 Manage users and administrator rights

1. Open Dashboard and select Users.
2. Search by email, filter by institution, or choose a minimum number of analyses. After entering the criteria, select the Search button to apply the filters.
3. In the Actions column, select Promote to Admin to grant administrator rights.
4. Select Remove Admin to remove administrator rights. Your own row displays You instead of an action button because you cannot change your own role.
5. Confirm that the Role column now shows site_admin for an administrator or user for a regular account.

© 2026 Achva LGBT — INCLUSIFY Built with accessibility and inclusion in mind.

Figure 21 - The Users tab, with the Role column and the Actions column

Use administrator rights carefully

Give administrator access only to trusted Achva staff who need to view system statistics or manage roles. Do not remove your own administrator role unless another administrator has confirmed the change.

9.2.1 When a user cannot see the Dashboard

- Ask the user to sign out and sign in again after a role change.
- Confirm that you updated the correct email address.
- Confirm that the Role column shows site_admin.
- When the problem continues, send the email address and a screenshot to the technical maintainer.

9.3 Review AI engine health statistics

1. Open Dashboard and select Model Performance.
2. Review the four health measurements: average response time, error rate, fallback rate, and total model calls.
3. Pay particular attention to fallback rate, which shows how often the system used its backup path. Compare all values with recent normal use.
4. When response times or error levels remain unusual for a long period, record the date and contact the technical maintainer.

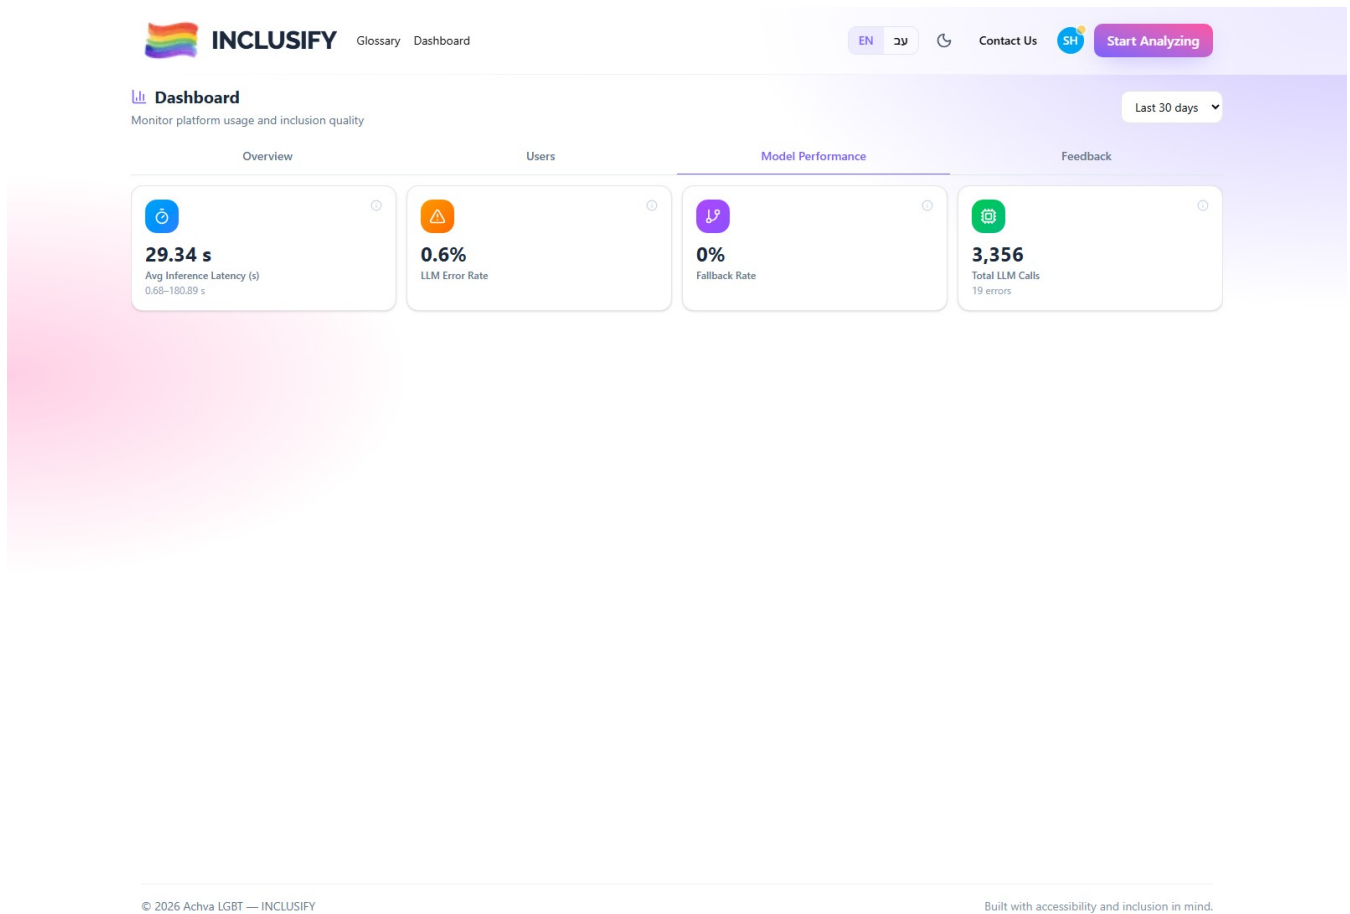

Figure 22 - The Model Performance tab and its four health measurements

Model unavailable warning

A yellow warning means that the AI engine is temporarily unreachable. Wait a few minutes and retry. When the warning continues for several hours, contact the technical maintainer.

9.4 Review user feedback

- 1. Select Feedback.
- 2. Filter the list by All, Helpful, or False Detection.
- 3. Read the vote, flagged text, severity, user, and date shown in each row. The counters and sentiment bar above the table summarize how many votes were helpful and how many marked a false detection.
- 4. Look for recurring complaints about the same phrase or type of result.
- 5. Collect representative examples and pass them to the technical maintainer for future model review and retraining.

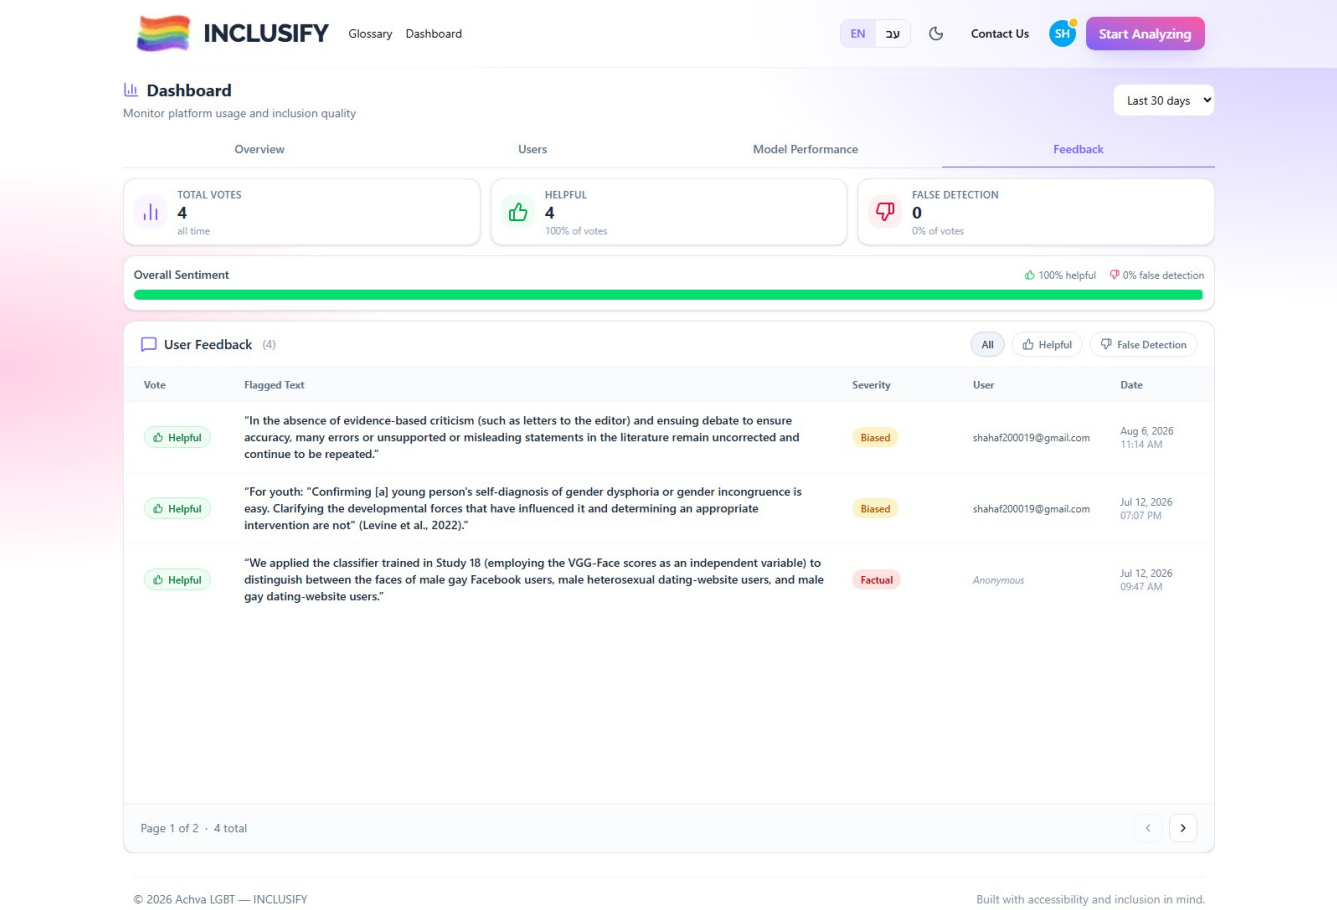

Figure 23 - The Feedback tab, with the vote counters and the feedback table

10. Privacy, FAQ and troubleshooting

10.1 Privacy and storage

Private Mode is technically enforced for document content: the analyzed text and findings are not stored for that run. Basic operational data, such as processing time and usage measurements, may still be recorded. When Private Mode is off, the full analysis can be stored. Signed-in users can return to saved analyses and reports. Guest analyses are stored without a link to an identity, so they do not appear in a personal history. Turn on Private Mode if you do not want the analyzed text stored at all.

10.2 Frequently asked questions

Why is my first analysis slow?

The AI engine may be starting after a quiet period. Analysis commonly takes between one and six minutes, depending on document length. Keep the page open and retry only if an error appears.

Which languages are supported?

Hebrew and English.

Why is my analysis missing from My Analyses?

Private Mode was enabled, you were not signed in, or the run did not complete successfully.

Why does the site show a model-unavailable warning?

The AI engine is temporarily unreachable. Wait a few minutes and retry.

Why is my scanned PDF slow or unreadable?

Scanned pages require text recognition. A scan can take about one to two minutes, and some scans contain no readable selectable text.

Is my document shared with anyone?

No. The document is used to produce your analysis and is handled according to the selected privacy mode.

Why can I not upload my file?

Confirm that it is PDF, DOCX, PPTX, or TXT, smaller than 50 MB, and no more than 50 pages. Remove a PDF password and try again.

Why did Contact Us stop accepting my message?

The form accepts up to five messages per hour from the same connection. Wait a while and send the message again.

Why did the system stop accepting new analyses?

The analyzer accepts up to 20 analyses per hour from the same account or connection. This protects the shared AI engine. Wait a while and try again.

10.3 Quick troubleshooting checklist

- Refresh the page and try once more.
- Keep the analysis page open until the result appears.
- Try pasting the text when a document cannot be read.
- Try a shorter document when a very long file fails.
- Use Contact Us for help and include the file type, language, approximate page count, and the exact message shown on screen.
